Release Notes March, 5.6.0.0

Type	Description	Requires support to activate
New feature	When processing EDI orders via Extend standard XML format it is now possible to identify product and sales unit via a GTIN number passed from an external system in the Extend Customer Order xml.	Yes, as integration project
New feature	The possibility to setup transport modes when booking order based on pre-defined delivery schema and warehouse/address data that match that schema and destination.	Yes
New feature	A new report displaying data related to best-before information about products in stock.	Yes
New feature	<p>Possible to define project and reason code to order rows. This means projects can be administered in the Back-end interface, as well as a reason code registry. When booking order from Back-end it is possible to connect these properties to order rows.</p> <p>Extend can also collect data related to warehouse, department and salesman and tie these data to accountings and accounting export formats such as OrderInvoice1.0 and AccountingSummar1.0.</p>	Yes, user rights need to be handled
New feature	It is now possible to set an explicit currency rate on a suborder, affecting the floating cost calculation of product cost. The explicit currency rate overrides any existing standard currency exchange rate, making it possible to use a fixed rate. The solution requires the products to be kept in same currency as the client's base currency.	No but, training is recommended
New feature	Possibility to define a text message on a Supplier agreement, appearing on suborder pdf print outs	Yes, if a custom template is used for the client
New feature	Feature named master data status has been added to product user interface. The feature makes it possible for a client to define what master data that is required to be set for a product to be complete. For example – is the product connected to a pricelist, is it connected to a warehouse, supplier agreement etc. We can also on field level define that a product for example must have a description, or any other data, set in order to be considered "Complete".	Yes, user rights for configuration of feature needs to be setup. Training is recommended.

	The feature will make it easier for the user to identify and handle products that are not correctly configured according to business needs.	
Improvement	Scheduled reports now include comments from warehouse personnel on warehouse transactions and is broader regarding which client report data it relates to.	No
Bug fiix	A product cannot (be design) be removed from a supplier agreement if non-finished suborders exists against that supplier agreement and product. However, when no non-finished suborders exist, it is allowed to remove the product-supplier agreement relation. When this was done it caused old suborders to be non-viewable in the Extend backend interface. This has now been resolved.	No
