Improvement	The Product availability API now supports reporting balance from an external balance provider, other than Extend. This means the system can be set up to report balance from an external source like a supplier. The same functionality has previously been available in Extend back-end and webshop.	Yes
Improvement	The order booking UI prevented the user from booking orders with a delivery date on Sundays. This has been corrected.	No
Improvement	The sub order booking page now lists suppliers in an auto-complete method to be better manage a big supplier registry.	No
Improvement	New KPIs have been added to visualize the number of complete/incomplete customer and or products in regard to master data settings.	Yes, possibly depending on user rights level
Improvement	The Extend Backend UI for product properties is now sorted alphabetically.	No
Improvement	Cost structure accounting is now supported for non-warehouse supplied products. Product cost can be divided in a cost structure and separate accounting rules can handle the structure.	Yes
Improvement	The salesman page UI has been adjusted regarding salesman budget from-and to-dates.	No
Improvement	The webshop platform now supports one user accessing several customers, letting the user select customer after login.	Yes
Improvement	The Magento sales channel integration now supports TLS 1.2 which might be required depending on setup on the Magento side.	No
Improvement	The user interface for uploading customer users has been corrected to better report errors on why contacts cannot be uploaded.	No
Improvement	The order search list now shows maximum of two (2) decimals to better match the detailed order view which already shows two decimals only.	No

Improvement	The WorkWave integration lets WorkWave locate the order geographically. This lookup sometime fails, making the order not transferable to WorkWave. If such a situation occurs, Extend now automatically transfers the order, forcing WorkWave to accept bad address data.	No
Bugfix	Excel report available from the web interface handling backorders has been corrected.	No
Bugfix	The customer invoice search list failed to display the connection to the invoiced order in some set-ups.	No
Bugfix	The user interface for credit an existing invoice has been corrected. The system sometimes failed to delete some invoice rows.	No
Bugfix	An invoice when generated from a return order failed to load in the preview interface.	No
Bugfix	If a product was marked as inactive on a supplier agreement it was not displayed in the order booking search results, now it will.	No
