Release Notes October, 5.10.0.0

Type	Description	Requires support to activate
New feature	The system can now be configured to automatically close (deliver to warehouse) return orders.	Yes
New feature	Three new Inventory turnover reports grouped by Product, Supplier and Product Category have been added.	Yes
New feature	The Extend API services now expose multiple methods against the supplier agreement data.	Add access rights to API Product role
New feature	The order registration interface in Extend now can be configured to allow booking orders to Holiday if client supports these kinds of deliveries.	Yes
New feature	The "order search" and the "search receiving" pages have been extended with the possibility to save a search filter. For search filters that are commonly used this will make it easy for the user to work with the same filter repeatedly. Filters can be saved and deleted.	No
New feature	A new principle of allocation has been added to better handle the issue of upcoming deliveries to a warehouse when calculating stock availability. This will support the scenario of orders that are added and that should be delivered in a distant future, but where these orders not should block other orders that are to be delivered in near future.	Yes
New feature	A new filter possibility named, "Critical shortage" has been added to the product/indication search of sub order booking interface. The filter finds items were indications has been taken care of and purchase orders has been created, but where orders not can be fulfilled within the requested time due to lead time of purchase orders.	No
