Version notes 6.3.0.0

Type	Part	Description	Requires support to activate
New feature	Backend	Support for defining door code and a fixed shipping mark on the customer and order entry in Backend has been added.	Yes
New feature	Integration	Extend has improved the connection to WorkWave by adding Delivery ETA and customer email. This to enable communication to the customer regarding ETA.	Yes
Improvement	Backend, Sales	Department and Salesman dimension values are now saved to accountings registry when warehouse event for return order receiving is processed.	Yes
Improvement	Backend, Finance & Integration	Integration with Fortnox now also include transfer payment terms to Fortnox. This requires, however, that payment terms are administered on the Fortnox side since no synchronization otherwise will be possible.	Requires administration on Fortnox side
Improvement	Integration	Improved data cleaning in the integration to Fortnox, now deleting blank space in article No.	No
Improvement	Backend	It is now possible to book products without balance on a warehouse transfer order enabling to perform movements in advance.	No

Improvement	Backend	Product graph for consumption has been adjusted to separate consumption caused by customer orders and other events	No
Improvement	Backend, Finance	The Customer data: Org. no., VAT no., and GLN is now saved to the invoice when an invoice is created.	No
Improvement	Backend	Improved UX making it easier to set reason code for returns.	No
Performance	Backend	Performance has been improved for the Balance List report	No
Bugfix	Backend	When adding or changing products and customers via the upload feature in Backend, an issue with statistical categories has been corrected.	No
Bugfix	Backend	An issue in the API for creating manual invoices has been corrected. Wrong conversion factor between sales unit and product unit was saved to invoice, causing statistical issues in the Product sales data view.	No
Bugfix	Backend, Sales	An issue with salesman customer search has been corrected	No
Bugfix	Backend	Aggregation correction, when canceling an order row we did not recalculate	No

		the balance in product balance aggregation	
Bugfix	Backend	Solved, error in the Ongoing integration regarding inventory balance in some specific cases.	No
Improvement	Backend, Finance	The customer property "Invoice payment type" is now described as "Default payment type" in the Extend backend user interface. The interface now allows the default payment type to be not set at all, i.e. left empty.	No
