Version notes 6.2.0.0

Type	Part	Description	Requires support to activate
New feature	Backend Masterdata Product Category Upload	Connecting products to product categories is now supported via upload functionality. Already existing categories can now be connected to existing products, making it easy to add products to the menu structure of the B2B webshop.	Yes, requires user rights.
New feature	Backend Masterdata Product Property Upload	New Upload feature that enables the user to connect product properties to products. This feature supports not only the connection of product properties to a product, but also the creation of new product properties. The properties are not required to exist in the application before connecting the product to the property.	Yes, requires user rights.
New feature	Backend Masterdata Bundle upload	Feature which enable the user to create bundles of products through upload functionality. An existing product with the supply mode Bill of Materials can now be connected to other existing products. Upload only support creations of new bundles.	Yes, requires user rights.
New feature	Integration/ Finance	Automatic matching between the Extend purchase order and the supplier invoice in Fortnox. Accepted deviation level can be defined and the deviations will be placed in a queue for review.	Yes
New feature	Backend Invoice distribution /Integration	Distribution of invoices via Fortnox Finans is fully supported and integrated with Extend. As of version 6.2, it is now possible to define an external system as the sender / distributor of an invoice.	Yes, Contact Extend support to discuss and enable support for distributing.
New feature	B2B webshop	The webshop application v.4 has been extended with functionality to configure which product filters are available to use in price range, country of origin and manufacturer.	Yes
New feature	Backend Order Management	Two new fields for searching for order rows have been added. Detailed and aggregated.	Yes, requires user rights.

New feature	Documents Email B2B webshop	Support for defining a price list as "Recommended Price" has been added. This gives the opportunity to compare the customer's price (e.g retail price) with "recommended price" in the webshop, on order confirmations, invoices etc.	Yes, Contact Extend support for customization of templates.
New feature	Backend Order Management	The standard in Extend is to release orders for pick-to-stock based on days. But if you work for example with an evening shift, or morning deliveries and do not want to mix the orders with regular orders, you can now add automatic extra releases to layers.	Yes, requires activation of Extends support.
Improvement	Integration / Finance	The usability for managing Fortnox sales channel has been improved.	No
Improvement	Backend Order management	To release orders that are stuck in the review que due to customer credit limit exceeded, explicit rights to do this is now required on the order for planning page.	Yes
Improvement	Backend Product	A filter has been added to the list of available units on the product page. This removes the units you never use to increase visibility. You can add units to your set of units in Settings under the general settings page, tab product settings.	Yes, requires user rights.
Improvement	B2B webshop	User registration pages in the webshop v.4 has been improved to better handle differences between required data depending on business or private customer.	No
Improvement	Backend Order management	A field in the order search has been added, making it possible to search for orders via "our reference".	No
Improvement	Backend Product/Price	When connecting a product to a pricelist and/or a discount list, more data about price list/discount list is now shown: name, description and valid from-to date.	No
Improvement	API	Data regarding batch and serial number has been added to the order API row data.	No
Improvement	Backend Client settings	Possibility to edit data related to the client has been made available to users	Yes, requires user rights.
