Release Notes 6.4.0.0

Type	Part	Description	Requires support to activate
1.New feature	Masterdata Backend	Upload support for variant products (previously configurable products with attributes) are now available. The transfer function allows a user to create variants via upload by first uploading all products through product upload and then connecting variants to the base product via this product variant upload.	Yes
2.New feature	Backend Order management	Support to cancel lines on "move between layers orders".	Yes
3.New feature	Backend API	Support for filtering change date in the product availability API.	No
4.New feature	Backend Purchase	We have made a graph change on the purchasing side. Consumption is now divided into different types of transactions.	No
5.New feature	New Integrated Partner	Integration with new external system for work order management, Minuba, has been implemented.	Yes
6.New feature	WMS	We developed a detailed logging of activities that a user does in the warehouse application.	Yes
7.Improvement	Integration / Finance	Correction of invoice integration with Fortnox has now been improved. Extend shorter now automatically down the field for reference to Fortnox with maximum limit of 50 characters.	No
8.Improvement	Backend Purchase	It's now possible to send purchases to more e-mail recipients / e-mail addresses.	No
9.Improvement	Backend	A minor adjustment of purchase order interfaces. Now the inventory system's part number is also displayed.	No

10.Improvement	Integration Ongoing Warehouse	An improvement of integration and synchronization with Ongoing has been made.	No
11.Improvement	WMS	We have expanded the information shown on the balance list, inside the product in the mobile pick. In order to enable this with limited size on smaller screens, we have added the possibility to hide display columns on the page.	No
12.Improvement	WMS	We have introduced a check that you do not put up two storage places with the same name.	No
13.Bugfix	Integration/ Finance	Improvement of integration with Fortnox has been made regarding the transfer of payment terms and adjustment of certain characters.	No
14.Bugfix	Backend Move between warehouse	Improvement of interfaces for moving between warehouse has been made. Previously, the available balance on page two and higher was not shown in the search result. This is now corrected.	No
15.Bugfix	Backend/ Finance	An error of a link in the invoice list has now been corrected.	No
16.Bugfix	Backend / Order- management	An error occurred when crediting return orders. This is now adjusted.	No
17.Bugfix	Backend / Reports	An error has been corrected which caused double rows in the report "Sales per customer and product".	No
18.Bugfix	Backend / Finance	One of the rounding errors that occurred in the payment registration interface has been corrected.	No
19.Bugfix	Backend Reports	An error in the report "warehouse new stock" has been corrected.	No
20.Bugfix	Backend / order management	"Order for planning" temporarily did not release orders that were stuck because the credit limit was exceeded. This is now adjusted.	No
21.Bugfix	Backend / master data	An error in product upload linked to statistical category level 3 has been corrected.	No

22.Bugfix	Backend / Finance	We have now adjusted the invoice editing for distribution "way to sent". The value is now saved correctly.	No
23.Bugfix	Backend / Finance	We now store the customer's corporate identity number, VAT no and delivery on the invoice head.	No
24.Bugfix	Backend / integration	An improvement has been made on filing against "call off orders". The Ongoing storage system did not properly handle partial storage of row. This has now been adjusted.	No
25.Bugfix	Backend	Interface for "show list of inventory balance" for the selected layer did not count on "move-between storage orders" for availability calculation. This is now adjusted.	No
26.Bugfix	Backend	An error in the report "accounting product" has been corrected, the report couldn't be generated.	Yes
27.Bugfix	Backend	Improvements in the user settings interface, general settings, structural cost, balance adjustment, and sales dashboard have been corrected with missing icons.	No
28.Bugfix	Backend / Order-Management	If you chose cause code in step 1 of the return order booking, this choice was not saved for the lines added, but one had to put this for each row and step.	No
29.Bugfix	Backend / Order-management	The default template for purchase orders now manages the logo and printing of several pages.	No
30.Bugfix	Backend	Uploading time for the product's connection to a supplier did not handle certain vendor names correctly. We have now improved this.	No
